

Creative Approaches to Greening the City

On Monday June 12 from 10 AM, in D452 (MCEV II)

Decision-makers and other key actors are increasingly exploring new ways to green our cities, from rooftops to walls and beyond. This talk critically explores such interventions and highlights good practice, alongside research in the field. A particular focus is on the wider benefits of these innovative approaches and how it links to ideas, such as the 'sponge' and 'healthy' city concepts. Case studies from Portland, USA to Manchester, UK are used to show creativity in cities.

Prof Mike Hardman
University of Salford, England

*The seminar is covered from SWAMP project (CZ.02.1.01/0.0/0.0/16_026/0008403),
Ministry of Education, Youth and Sports of the Czech Republic*
